

DON'T SELL THE WORKSHOP. SELL THE OUTCOME.

AI60 Growth OS — Growth Intern Challenge | 500 Final-Year Engineering Students (Class of 2027)

TARGET AUDIENCE Class of 2027 — Final-year B.Tech / B.E. students across Tier-2 & Tier-3 engineering colleges preparing for technical placement drives. THE UNDERLYING PROBLEM Final-year students are overwhelmed by passive, generic webinars. They don't value another attendance certificate. Their urgent motivation is verifiable proof of work they can defend in technical placement rounds. BARRIER TO CONVERSION Asking students to register upfront asks for commitment before demonstrating personal utility, causing steep drop-offs.	THE CORE THESIS <i>"Don't ask students to register — give them a reason to want to register."</i> FUNNEL TRANSFORMATION Traditional Funnel: Landing Page → High-Friction Form → Passive Webinar AI60 Growth Funnel: Discover → Personalize → Project Passport → 5-Field Registration Strategic Insight: Value comes before commitment. The Project Passport turns a generic workshop into a customized build sprint.	WHAT STUDENTS GET BEFORE REGISTERING In under 60 seconds (answering a few quick questions), the student generates their personalized dossier: • Personalized AI Project Concept: Mapped to their domain & skill level. • 60-Minute Build Roadmap: 4 timed phases (Setup → UI → AI API → Demo). • Interview Positioning: Strategic talking points for recruiters. • Example Resume Bullet: Placement-ready technical bullet point. <i>Result: Registration friction collapses because the student is claiming a solution they already own.</i>
--	--	---

THE GROWTH LOOP — VALUE-FIRST ARCHITECTURE

VALUE → REGISTRATION → REFERRAL → MORE STUDENTS → WORKSHOP → PROJECT → COMPETITION

1. VALUE Project Passport Blueprint + 60m roadmap	2. REGISTER 5-Field Form Class of 2027 minimal friction	3. REFERRAL Verified Loop WhatsApp pre-filled invite	4. MORE STUDENTS Campus League College & referral rankings	5. WORKSHOP Live Sprint Build first AI project in 60m	6. PROJECT Proof of Work GitHub code & resume bullet	7. COMPETITION Human Judged Rs.900 prize pool showcase

UPFRONT VALUE: THE PROJECT PASSPORT

"Don't ask students to register — give them a reason to want to register."

Taking 4 diagnostic inputs (Branch, Skill level, Interest, Preferred domain), the engine generates an interview-ready dossier in 60 seconds:

- **1. Project Idea & Title:** Concrete problem formulation.
- **2. 60-Minute Scope:** What they build live in the sprint.
- **3. Suggested Tech Stack:** Modern APIs & frameworks.
- **4. 4-Phase Roadmap:** 0-15m Setup → 15-35m UI → 35-50m AI → 50-60m Demo.
- **5. Resume Bullet:** Placement-ready technical point.
- **6. Interview Talking Point:** Architectural defense statement.

Strategic Insight: Give value before asking for registration. Students claim an asset they already own.

DISTRIBUTION & REWARD INCENTIVE SYSTEM

"Turn registered students & creators into active distribution channels."

1. Student Creator Challenge (Rs.300 Prize)

Students create promotional reels, WhatsApp creatives, or posts with tracking codes.

Scoring Rubric: Qualified Regs 60% + CTR 20% + Engagement 10% + Creativity 10%.

2. Campus Referral Leaderboard (Rs.500 Prize Pool)

Prizes: #1 Rahul Rs.250 • #2 Priya Rs.150 • #3 Arjun Rs.100.

Anti-Fraud Rule: Only verified unique student registrations count. Duplicate emails blocked.

3. AI Project Competition (Rs.900 Prize Pool)

Prizes: #1 Rs.400 • #2 Rs.300 • #3 Rs.200 for best project code submitted post-workshop.

5-Point Rubric: Functionality 30%, Creativity 25%, AI 20%, UX 15%, Defense 10%.

500-REGISTRATION PLANNING MODEL & Rs.2,000 BUDGET

PLANNING ASSUMPTION — NOT ACTUAL CAMPAIGN RESULTS (Hypotheses to validate during 7-day experiment)

NOTE: 500-registration target model — planning assumptions, not campaign results. Levers model channel distribution, not guaranteed acquisition.

500-REGISTRATION CHANNEL MIX (HYPOTHESIS)				TOTAL BUDGET ALLOCATION: EXACTLY Rs.2,000		
Channel	Strategic Role	Regs	Share	Strict financial discipline. Zero budget leak.		
Campus Captains + Chapters	25 captains × 8 regs avg (planning assumption)	200	40%	Allocation	Strategic Purpose	Amount
Student Referral Engine	Verified unique peer-to-peer invites	150	30%	Creator Challenge	Rs.300 prize for top promotional creator (qualified regs + score)	Rs.300
Student Creator Challenge	Student promotional creators (Rs.300 prize)	50	10%	Referral Rewards	Top 3 verified referrers (Rs.250 / Rs.150 / Rs.100)	Rs.500
Organic Social + Communities	Placement WhatsApp, Telegram, LinkedIn	100	20%	AI Project Competition	Post-workshop awards (Rs.400 / Rs.300 / Rs.200) — post-workshop incentive	Rs.900
TOTAL TARGET	Planning Baseline	500	100%	Contingency	Unallocated reserve buffer for campaign safety	Rs.300
Data Integrity Note: 500-registration target model — planning assumptions, not campaign results. Levers model channel distribution, not guaranteed acquisition.				TOTAL	Hard budget ceiling	Rs.2,000
				Post-Workshop Note: The Rs.900 project competition is a post-workshop engagement incentive (not acquisition spend). The Rs.300 creator challenge funds peer acquisition directly.		

I DIDN'T JUST WRITE THE PLAN. I BUILT THE LOOP.

Working prototype with full-funnel instrumentation, attribution, and experimentation framework.

Component	Growth Objective	Execution Proof
AI Project Passport	Eliminate registration commitment resistance	A few quick questions → instant 60-min project blueprint & resume bullet
Registration Flow	Low-friction capture for Class of 2027	5 fields only (Name, Email, College, Branch, Year 2027)
Referral & League	Organic viral distribution via collegiate pride	Requires 2 verified friend signups; real-time campus ranks
Creator Challenge	Student-led content acquisition & testbed	Rs.300 prize; judged on qualified regs (60%), CTR (20%), score (86 top)

AI PROPOSES. EXPERIMENTS MEASURE. I DECIDE.

Demonstrating growth judgment, self-awareness, and disciplined execution tradeoffs.

WHAT CHANGED?

"I initially considered a landing-page-first approach. I changed to a value-first Project Passport + referral system because acquiring a student should create an opportunity to acquire the next student."

STRATEGIC RATIONALE

A standard webinar landing page is linear and leaks traffic at the form. By inverting the funnel to deliver the AI Project Passport upfront, each registrant experiences tangible career utility, converting them into active campus referrers.

Core Loop: Value → Registration → Referral → More Students.

WHAT DID AI SUGGEST THAT I REJECTED?

"AI suggested generic paid advertising and aggressive urgency tactics. I rejected these because Rs.2,000 is too small for reliable cold acquisition and fake urgency harms trust. I replaced paid ads with a Rs.300 Student Creator Challenge instead."

WHY HUMAN JUDGMENT MATTERS

- **No Fake Scarcity:** Engineering seniors detect and reject fake countdowns immediately.
- **Creator Incentives over Cold Ads:** Rs.300 prize motivates student creators with localized collegiate trust.
- **Quality-First Metric:** Views & clicks are useful, but decisions (KILL/SCALE) rely on qualified registrations.

WHAT WOULD I IMPROVE WITH ANOTHER 24 HOURS?

"I would pilot the campaign with 3 colleges, run A/B tests on the referral incentive and creator formats, and scale Creator B's portfolio angle across all campus ambassadors."

24-HOUR EXECUTION DRILL

- **3-College Pilot:** Test organic WhatsApp broadcasts at VIT, Amrita, and SRM.
- **Scale Creator Winner:** Replicate Creator B's 60s prototype format across campus captains.
- **Attendance Optimization:** Deploy WhatsApp calendar reminders post-registration.

AI proposes. Experiments measure. I decide.
